Table of Contents

Preface

Chapter 1 Vectors

1.1 Introduction.
1.2 Vector Algebra - The Addition of Vectors.
1.3 Vector Subtraction - The Negative of a Vector.
1.4 Addition of Vectors by the Polygon Method .
1.5 Resolution of a Vector into its Components
1.6 Determination of a Vector from its Components.
1.7 Unit Vectors.
1.8 The Addition of Vectors by the Component Method.
1.9 The Multiplication of Vectors.
1.10. The Scalar Product or Dot Product.
1.11. The Vector Product or Cross Product.
1.12 The Del Operator - the vector derivative.
Summary of Important Concepts
Summary of Important Equations
Problems for Chapter 1

Chapter 2 Electrostatics and Coulomb's Law

2.1 Introduction.
2.2 Atomic Structure.
2.3 Coulomb's Law.
2.4 Multiple Discrete Charges.
2.5 Forces Caused by a Continuous Distribution of Charge.
Summary of Important Concepts
Summary of Important Equations
Problems for Chapter 2

Chapter 3 Electric Fields

3.1 The Electric Field
3.2 The electric field of a point charge.
3.3 Superposition of electric fields for multiple discrete charges.
3.4 The electric field along the perpendicular bisector of an electric dipole.
3.5 The torque on a dipole in an external electric field.
3.6 Electric fields of continuous charge distributions.
3.7 The electric field on axis of a charged rod.
3.8 The electric field on axis for a ring of charge.
3.9 The electric field on axis for a disk of charge.
3.10 The electric field due to a finite line of charge.
3.11 The electric field due to an infinite plane sheet of charge.
Summary of Important Concepts
Summary of Important Equations
Problems for Chapter 3

Chapter 4 Electric Flux and Gauss's Law

4.1 Introduction.
4.2 Electric Flux.
4.3 Gauss's Law for Electricity.
4.4 The electric field of a spherically symmetric uniform charge distribution.
4.5 The electric field of a spherically symmetric nonuniform charge distribution.
4.6 The electric field of an infinite line of charge.
4.7 The electric field of an infinite plane sheet of charge.

4.8 The electric field inside a conducting body.
4.9 The electric field in front of an infinite charged conducting plate.
4.10 The electric field between two oppositely charged parallel conducting plates.
4.11 The electric field associated with charged concentric conducting cylinders.
4.12 The Differential Form of Gauss's Law and Gauss's Divergence theorem
4.13 The Divergence and Its Physical Significance
Summary of Important Concepts
Summary of Important Equations
Questions for Chapter 4
Problems for Chapter 4

Chapter 5 The Electric Potential
5.1 Potential Energy.
5.2 The Electric Potential and the Potential Difference.
5.3 Generalization of the formulation for the Potential Difference.
5.4 The potential of a positive point charge.
5.5 The point charge and the gradient of the potential.
5.6 Superposition of potentials for multiple discrete charges.
5.7 The potential of an electric dipole.
5.8 The potential energy of an electric dipole in an external electric field.
5.9 The potential for continuous distribution of charge.
5.10 The potential on axis for a charged rod.
5.11 The potential on axis for a ring of charge.
5.12 The potential on axis for a disk of charge.
Summary of Important Concepts
Summary of Important Equations
Questions for Chapter 5
Problems for Chapter 5

Chapter 6 Capacitance
6.1 Introduction.
6.2 The parallel plate capacitor.
6.3 The cylindrical capacitor.
6.4 The spherical capacitor.
6.5 Energy stored in a capacitor.
Summary of Important Concepts
Summary of Important Equations
Questions for Chapter 6
Problems for Chapter 6

Chapter 7 Dielectrics
7.1 Introduction to dielectrics.
7.2 Atomic description of a dielectric.
7.3 A parallel plate capacitor with a dielectric between the plates.
7.4 Dielectrics and Coulomb's law.
7.5 Dielectrics and Gauss's law.
7.6 The Polarization vector, the Displacement vector and the Electric field vector.
7.7 An infinite line of charge encased in glass.
7.8 The differential form of Gauss's law when a dielectric is present.
7.9 The energy stored in the electric field when a dielectric is present.
Summary of Important Concepts
Summary of Important Equations
Questions for Chapter 7
Problems for Chapter 7

Chapter 8 Magnetism
8.1 The force on a charge moving in a magnetic field - the definition of the magnetic field B.
8.2 Force on a current-carrying conductor in an external magnetic field.

8.3 Force on a semicircular wire carrying a current in an external magnetic field.
8.4 Generation of a magnetic field.
8.5 The Biot-Savart law.
8.6 The magnetic field at the center of a circular current loop.
8.7 Magnetic field around a long straight wire.
8.8 Magnetic field on axis for a circular current loop.
8.9 Ampere's circuital law.
8.10 The magnetic field around a long straight wire by Ampere's law.
8.11 The magnetic field inside a solenoid.
8.12 Magnetic field inside a toroid.
8.13 Torque on a current loop in an external magnetic field - the magnetic dipole moment.
8.14 Permanent magnets and atomic magnets.
8.15 The potential energy of a magnetic dipole in an external magnetic field.
8.16 Magnetic flux.
8.17 Gauss's law for magnetism.
8.18 Gauss's law for magnetism in differential form.
Summary of Important Concepts
Summary of Important Equations
Questions for Chapter 8
Problems for Chapter 8

Chapter 9 Electromagnetic Induction
9.1 Introduction.
9.2 Motional emf and Faraday's law of electromagnetic induction.
9.3 Lenz's law.
9.4 The induced emf in a rotating loop of wire in a magnetic field - Alternating emf's and the AC generator.
9.5 Mutual induction.
9.6 Self-induction.
9.7 The energy stored in the magnetic field of an inductor.
9.8 Comparison of the electrostatic field and the induced electric field.
9.9 Stokes' theorem.
9.10 Generalization of Faraday's law of electromagnetic induction.
9.11 The curl of the electric field.
Summary of Important Concepts
Summary of Important Equations
Questions for Chapter 9
Problems for Chapter 9

Chapter 10 Maxwell's Equations
10.1 Introduction
10.2 The displacement current and Ampere's law.
10.3 Ampere's law in differential form with the displacement current term.
10.4 Faraday's law revisited.
10.5 Maxwell's equations in integral form.
10.6 Maxwell's equations in differential form.
10.7 Electromagnetic waves.
10.8 The electromagnetic spectrum.
10.9 Energy transmitted by an electromagnetic wave.
Summary of Important Concepts
Summary of Important Equations
Questions for Chapter 10
Problems for Chapter 10

Appendix A Some formulas that may be helpful.
Appendix B Review of derivatives.
Appendix C Review of Wave Motion
